                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          bearing an antigen comprising at least 10 contiguous amino acids of mesothelin involves: (a) providing a chimeric molecule comprising the effector molecule attached to a targeting molecule that specifically binds to mesothelin; and (b) contacting the tumour with the chimeric molecule such that the chimeric molecule specifically binds to a tumour cell. Also claimed is a method for inhibiting mesothelin expression or activity by contacting mesothelin bearing cells with inhibitory nucleic acids for the mesothelin gene. The methods can be used to detect tumour cells and to inhibit the growth of cells bearing mesothelin. Mesothelin derived antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mesothelin. Its amino acid sequence was deduced from a cDNA clone (see AAT91079) isolated from a HeLa cDNA library. A 40 kDa form (K1) of mesothelin that is found on the surface of human ovarian tumour OVCAR-3 cells appears to be derived from the 69 kDa precursor by several processing steps. A claimed method for specifically delivering an effector molecule to a tumour cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   on mesorhelium, mesorhelionas, ovarian cancers and some squamous cell carcinomas. The antigen has been designated

Antibodies specific to MRA polypeptides are used for the detection of a malignant condition. Mesothelin is a differentiation antigen which is expressed in the surfaces of normal mesothelial cells and also on certain cancer cells, including epithelial ovarian tumours and mesotheliomas. The method is useful for detecting the presence of a malignant condition, specifically, adenocarcinoma, mesothelioma, ovarian carcinoma, pancreatic carcinoma or non-small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     591 GYLVLDLSVO

Antibodies specific to mesothelin related antigen (MRA) polypeptides are used for the detection of a malignant condition. Mesothelin is a differentiation antigen which is expressed in the surfaces of normal mesothelial cells and also on certain cancer cells, including epithelial ovarian tumours and mesotheliomas. The method is useful for detecting the presence of a malignant condition, specifically, adenocarcinoma, mesothelioma, ovarian carcinoma, pancreatic carcinoma

Antibodies specific to MRA polypeptides are used for the detection of a malignant condition. Mesothelin is a differentiation antigen which is expressed in the surfaces of normal mesothelial cells and also on certain cancer cells, including epithelial ovarian tumours and mesotheliomas. The method is useful for detecting the presence of a malignant condition, specifically, adenocarcinoma, mesothelioma, ovarian carcinoma, pancreatic carcinoma or non-small cell lung carcinoma

Sequence
                    Use of the primers given in AAO77805-08 in PCR resulted fragments given in AAO63969-70. The properties given in AAO63969-70 in treatment of DNA encoding Meg-Pot has potential use in treatment of thrombocytopenia and low platelet function.
                                                                                                    New mega: karyoctye potentiator \cdot for potential treatment of thrombocytopenia

disorders e.g. amnesia of age-related memory loss, and neurological disorders e.g. migraine. AZAD molecules are useful as markers of disorders or disease states, as markers for precursors of disease state, for predisposition of disease state or as markers of drug activity or pharmacogenomic profile of a subject. The AZAD polypeptide and polynucleotide are capable of modulating protein-protein interaction, e.g. by interacting with an extracellular component, thereby modulating cellular activities, including attachment, adhesion, migration, patterning, growth and/or differentiation of a cell. AZAD proteins are and function, pathological conditions, e.g. neuronal degeneration, neoplastic transformation and tumour progression. AZAD proteins are neoplastic transformation and tumour progression. AZAD proteins are
                                                                                                                                                        useful as immunogens to raise anti-AZAD antibodies which are useful to detect and isolate AZAD proteins and modulate its activity. AZAD proteins are useful to screen for naturally occurring AZAD substrates and to screen for drugs or compounds which modulate AZAD activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           epilepsy, psychiatric disorders e.g. depression, schizophrenic disorders, mania, anxiety or phobic disorders, learning or memory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New leucine-rich repeat-containing protein and nucleic acid molecules for diagnosing, treating neural disorders, such as neurodegenerative disorders, such as Alzheimer's disease, dementia, epilepsy and prostate
                                                                                                                      AZAD nucleic acid fragments are useful as primers or hybridisation probes for the detection of AZAD-encoding nucleic acids. cDNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and cancer (e.g. adenocarcinoma, prostate cancer, genitourinary system carcinomas and testicular tumour). The neurodegenerative disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and a prostate disorder, e.g. prostatitis, benign prostatic hyperplasia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnosing AZAD-mediated or related disorders, which includes a neural disorder (e.g. neurodegenerative disorders, including CNS disorders)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-381633/40.

Secreted protein, AZAD. AZAD polypeptide is useful for secreted protein, AZAD. AZAD polypeptide its activity and binds to identifying a compound which modulates its activity and binds to identifying a compound which modulates are useful for treating.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AZAD proteins and nucleic acid molecules are useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                            The present invention relates to human JAFFA polyhuclevilves (New AAF90326) and polyheptides (see AAB82351). JAFFA is a novel membe of the fibroblast growth factor family. JAFFA proteins may be useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders such as cancers and ABO(H) blood group disorders, and for controlling cellular proliferative and/or disorders, and for controlling cellular proliferative and/or
                        used to treat and/or diagnose a variety of immune disorders such as autoimmune disease and multiple sclerosis. JAFFA nucleic acids may also be used to express JAFFA protein, to detect JAFFA mRNA or a genetic alteration in a JAFFA gene, and to modulate JAFFA activity. Note: The present sequence is given in the Sequence Listing from
                                                                                                                                                                                                                                                                                 Isolated JAFFA nucleic acid molecules which encode novel fibroblast growth factor family members (JAFFA) are useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders suc
                                                                                          disorders, and for controlling certural process and proteins may be differentiative disorders. JAFFA nucleic acids and proteins may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB82352 standard; Protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                          This invention describes a novel human phospholipase A2 (PLA2) protein (I) and its encoding nucleic acid. The amino acid (I) releases arachidonic acid in specific tissues characterized by unique membrane phospholipids, by generating lysophospholipid species which are deleterious to membrane integrity or by remodeling of unsaturated species of membrane phospholipids through deacylation/reacylation mechanisms. The amino acid is useful in assays to identify inhibitors having a therapeutic benefit, such as inhibiting the central role of PLA2 in the inflammatory component of Alzheimer's disease. The amino acid (I) allows sensitive and rapid screening and identification of inhibitors of phospholipase A2. This sequence represents the human PLA2 protein (also known as phosphatide 2-acyl hydrolase).
                                                                                                                                                                                                                                                                       Claim 1; Column 53-58; 32pp; English.
                                                                                                                                                                                                                                                                                                     An isolated amino acid having phospholipase (PL)A2 activity is useful in assays to identify inhibitors having a therapeutic benefit, such as inhibiting the central role of PLA2 in the inflammatory component of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PLA2; phospholipase A2; phosphatide 2-acyl hydrolase; human; therapy; arachidonic acid; lysophospholipid; Alzheimer's disease.
